

Internet Safety Slide Videos

Part I.

Directions: You will go to <http://websafety101.wikispaces.com> and click on “Grade 6-8 Lessons”. You and your partner will choose a topic out of a hat to research. You are to find the section on the page and answer the questions given for the topic.

When you have the answers to the questions, you will create a script to be read for your video. Make sure that you answered the questions completely and that you checked your grammar / spelling. You need to put your names on the script.

Part II.

Directions: You will find a picture (s) to represent each question. You will create a PowerPoint presentation with your pictures. **Only one slide per question.** You will add a slide at the end to put your sources on. Make sure your pictures are clear. **You will print your slide show with two slides per page.**

Part III.

Directions: You will use the digital camera to videotape the PowerPoint slides as you read your script off camera. Make sure that you speak clearly. Your video needs to focus on the pictures ONLY. Introduce yourselves with first name only. The last image on your slide video should be your websites/sources.
